

TUF board

TUF Board® -- Builders' First Choice

TUF Board® is a cellular PVC board. It is a perfect replacement for wood in most non-load-bearing applications. TUF Board® is available in traditional matte /matte and reversible wood grain/matte finish. It is better than clear and premium lumber. It is ideal for trimboard, fascias, casing, soffits, columns, window trim, millwork, moulding and more.

TUF Board® will not swell, rot, crack, split or delaminate like wood, MDF, or MDO. It is lightweight, moisture resistant, resistant to insects and many chemicals, and less susceptible to warp.

TUF Board® can be cut, machined, nailed, glued, and screwed just like wood. It is fire retardant (UL-94 V0, 5V, HB), and has much better machining qualities than those of wood.

TUF Board® is available in both sheet and board. The thickness ranges from 3/8" to 1-3/16".

TUF Board® is manufactured in the U.S.A. by the World-Pak division of Inteplast Group, Ltd.
